

THREE UNKNOWN VIRTUAL AND REAL CAUSES OF PSYCHOLOGICAL AND PHYSICAL DISORDERS THAT HAVE A NEGATIVE IMPACT ON OUR LIVES

Text by CG Jung

"A minority, still too small, is wondering whether the best way to serve society, women, men and children, would not be to start with themselves, to try out first and only on their own person, in their own internal economy, the reforms preached at all the crossroads".

The aim of this article is to inform that there are 3 major causes of unknown interference that disturb our natural balance of physical, mental and social health. The consequences of these 3 states of interference affect our balance, our harmony, as well as the manifestation of accuracy in your life. This implies a loss of autonomy and responsibility. I have deliberately left out the other causes of disturbance - chemical, traumatic, infectious - which go without saying in the manifestation of symptoms.

These states of interference create imbalances which have a direct impact on our state of balance in our internal and external environment. This state of imbalance will create an internal and external environment which makes it difficult to maintain a state of correct expression and manifestation of health in our lives. All this will be expressed through a series of psychological, chemical, physical and even social symptoms which will be analysed and diagnosed. Based on these diagnoses, external 'inhibitor reduction' or 'stimulation' procedures of a chemical, surgical, photonic, mechanical, genetic, psychological or other nature will be proposed to relieve, alleviate or eliminate the symptoms. But what are we doing about the cause of all these symptoms? Where is our potential for natural self-regulation? Where is our potential for self-healing? Where is our natural state of balance, harmony and precision that allows us greater autonomy and responsibility? Outside us, or inside us?

There is a precise sequence in the manifestation of these 3 main causes of interference which cause internal and external disorder. "Everything manifests itself from top to bottom, from inside to outside". So, "any solution to a problem must come from the top, downwards from the inside out".

What do these two enigmatic phrases mean?

Let's talk about the 3 main causes of interference.

The first interference is purely abstract, virtual and symbolic.

It is the Law of Genesis, the Law of the Sense of the Project (+/-), the Law of Intentions (+/-), the Law of Emotions (+/-), the Law of Action-Reaction (+/-). These laws are identical, of the same nature and principle. They impose their diktats and their dominations, positioning us as "automatons/slaves" evolving in a multidimensional matrix. This first interference is activated long before conception, is polarised (emotions + or -) at conception, during pregnancy, at first breath, during the first 3 months and the first 3 years. Education seals everything, for better or for worse. And history repeats itself in a different setting. This first cause of interference has almost total control over the individual. It is located in a reality that is "delocalised", timeless. It is sometimes called the collective unconscious. It is amoral, neither good nor bad. It manifests itself in different ways: parental, transgenerational, ethnic, memories linked to multidimensionality, history, culture, cults, the arts, professions, the SELF, a character (role-playing), the concept of the shadow (described by C. G. Jung), the model of perfection, anima or animus, feminine or masculine sexualisation, feminine or masculine neurosociological profile. It uses genetic and biological leverage to continue to impose itself and grow

these memory programmes in a constant back-and-forth on the "past, present, future, present and past" chronology. The psychoanalyst C.G.Jung gave it a name: ARCHETYPES.

Let's ask ourselves the right question: What is the cause and origin of our mental and physical illnesses, our unconscious and conscious conflicts, our family and social problems, our economic disruption, our internal and external wars, our nightmares, our dreams, our successes, our failures, our social standing? our beliefs and disbeliefs, our professional commitment, our political commitment, our religious affiliation, our taste for certain foods or music, our attraction to different cultures, our fascination with different models of women or men? It is infinite and seemingly potentially impossible to answer any of these questions.

Let's look at the situation from another angle: with a few exceptions, at the moment of conception and throughout the period of intra-uterine growth, the foetus is 'programmed' to reach the term 'PERFECT HEALTH' and most births occur without harming the child. It is only in a few minutes, hours, days, weeks, months, years or decades that health problems of all kinds with their symptomatic manifestations will spontaneously or gradually "set in" in the short or long term. All will be examined, evaluated and synthesised to lead to one or more diagnoses which will be equivalent to a hypo- or hyper-functioning of a psyche, an organ, an internal biochemistry or a neuro-musculo-skeletal imbalance. Therapeutic protocol: inhibit what is hypofunctional or stimulate what is hypofunctional

There is always an immaterial "archetypal programmer" who will be activated by an internal or external "trigger-catalyst" who will ensure that the "me-programmer" crystallises in its material reality the perfect meaning of the project of the immaterial "archetypal programmer". In other words: every immaterial or material reality exists because an intentional programme has been activated without its knowledge, and will have to submit to this loyalty throughout its life, unless work is done on the unconscious of the conscious.

Several paths are suggested for responding to the archetypes and beginning 'deep' work. Based on my personal experience, I suggest three very effective ones.

Path 1:

The dream path through its symbolism and interpretation. Several methods of analysis - of varying degrees of precision - are available to the interested public. The one I propose and use is the analytical approach of C.G. Jung, which has demonstrated its effectiveness through a rigorous scientific methodology that respects the individual by including the mystical aspect of the dream symbolism experienced by the dreamer, using a very specific terminology that enables us to evolve effectively and target the content of a patient's conflict and thus bring him or her to an "awareness" or "illumination" of their unconscious and archetypal problem and thus open the door to a problem that is sometimes radically transformed. C.G. Jung wrote many books that you can refer to and discover the full richness and depth of his teachings.

Path 2:

The T. P.E.T. (Present Expansive Therapy) pathway is based on a global understanding of quantum physics in relation to the multidimensional and simultaneous nature of events + the law of genesis or the law of intentions + the language and mechanics of C.G. Jung's psychoanalysis + a precise sequence of actions applied to the patient. This "mix" of approaches, combined with a specific analysis of a patient's request in relation to a psychological, physical or sociological problem. The therapist then has "direct access" to the individual's unconscious archetypal symbolic scenario. This virtual and symbolic "encounter and recognition" of the conflict scenario enables a "specific sequence" to be identified that

resonates with the problem. Once identified, a process of "intentional re-information" is introduced into the vibratory structure, which will activate a readjustment and refocusing of the energetic structure. Once the procedure has been completed, a specific dialogue is initiated with the patient to trigger an "awareness" or "illumination" of the root cause of the problem encountered and the implementation of a solution. A thermographic assessment is carried out before and after the T.P.E. procedure, and this is an excellent and effective way of showing the power of intention and the impact of the "transformation" on the patient's reality.

Path 3:

The workshop path: The E.C.H.O.S. (Simultaneous Hologramic Collateral Existence) project is a specific evolutionary training course from 10 days (1 day per month) to understand, explore and experiment with the T.E.P. concept without learning the sequence of actions. Each stage of the training enables a deeper awareness of reality through a new perception (tool). The ECHOS Project highlights the colossal manipulative power of the ARCHETYPES and their influences on our daily lives, as well as the direct impact they have on the appearance of numerous psychological, physical, social, historical and other problems. The ECHOS Project offers you the opportunity to "DIFFERENTIATE" these archetypes. And finally give you the opportunity to **write your own story**.

The second interference is real and biomechanical.

It is the ATLANTO-AXIAL SUBLUXATION or subluxation of the first cervix called Atlas and the second cervical called Axis. Without going into all the details of the location, the anatomical shape, the reason for the great mechanical mobility, the feminine and masculine symbolism of these two vertebrae and the direct relationship they have with the brain stem. Atlanto-axial interference or subluxation has a direct influence on the quantity of vital energy in relation to the quality of life that circulates via the nerves between the brain (central computer), the first cervical (atlas), the second cervical (axis) and then to the rest of the body via the spinal cord, which is protected by a series of cervical, dorsal, lumbar and sacral vertebrae, all of which have anatomical variables and reduced mobility compared with the first two cervicals (atlas-axis), which have great mobility.

The reduction in the "quantity of vital energy" affecting the "quality of expression" of part or all of the body activates two adaptation mechanisms: hypofunction or hyperfunction of the parts of the body or organs directly or indirectly affected by the atlanto-axial subluxation. Health problems will set in spontaneously or gradually over the short or long term, and will be examined, assessed and synthesised, leading to one conclusion: there is a dominant atlantoaxial interference/subluxation (one of the 256 possible combinations identified between the occiput and the C1-C2-C3). There is then a dysfunction and a major disturbance of the body's natural balance; a hypofunction or hyperfunction of the psyche, an organ, an internal biochemistry, a neuro-musculo-skeletal function.

Therapeutic protocol for one session: Thermographic assessment before restoring normal mobility in the upper cervical region using a specific atlanto-axial adjustment. The amount of vital energy tends to gradually return to its normal level (100%). Important: a rest period of 45 to 60 minutes at the clinic is necessary to stabilise the adjustment. A second thermographic assessment is carried out to confirm the change.

The superior cervical therapy approach I use is based on 30 years of clinical research conducted by Dr. B.J. Palmer D.C. and his team. Numerous books and research compilations are available.

It should be noted that there are variables in superior cervical subluxation adjustment procedures.

The third interference is of a 'real/virtual' nature. It is linked to the neuro-spatial system.

Neuro-spatial technology is the cornerstone of our reality and our evolution. Our brain is a "quantum biological computer" that uses on average 10% of its full potential. Numerous "neuronal files" are waiting to be opened to allow an exponential increase in brain capacity, so that we can evolve in our three-dimensional reality and very probably in other dimensions. My approach has spanned 30 years of clinical observations and experiments on the mechanics of neurosociological functioning in women and men, and has enabled me to understand the behavioural differences between right-handed, right-handed, left-handed and left-handed people.

Discovery 1:

The tracking and identification of four different neurosociological patterns for female right-handers, male right-handers, female left-handers and male left-handers. A mathematical model of all these neurosociological patterns, called F.P.S.A. (S.A.P.F.) (Seduction and Action Power Factor) was created to better understand and identify the neurosociological profile of the participants. was created to better understand and identify the neuro-sociological profile of the 16 basic reference models and the corresponding sub-models.

Discovery 2:

Understanding the mechanisms by which the F.P.S.A. operates and functions . enabled me to elucidate the reasons for the various pathologies, some of which are gender-specific (female or male), others not.

The first is a pathology called 'basic tension', which is simply an increase in the F.P.S.A. of the basic neurosociological profile. It is easily manageable.

The second is a condition known as "inversion overstress", which is activated as a result of an amplification and/or switching mechanism in the opposite cerebral sphere. The subtone then appears. The F.P.S.A. of the undertone will activate pathologies which will be much more serious and intense, more difficult to manage.

The third is a pathology of "distress"; it is an amplification of the phase of "inversion overstress". The F.P.S.A. of the amplified subtone is then different and leads to the expression of pathologies that are difficult to manage, or even unmanageable.

Discovery 3:

The right-handed male/female person uses one hemisphere at a time. Depending on their basic neurosociological profile, they will function either on the hemisphere with a feminine principle, or on the hemisphere with a masculine principle. When he switches to the opposite hemisphere, there is a "flip-flop" or "brain switch" that activates a state of neurological imbalance of varying duration. As a result, right-handed women and men have a limited capacity to adapt.

The left-handed man/woman will constantly function on both hemispheres at the same time. This means that left-handed people and men have a much greater capacity for adaptation.

Discovery 4:

When a child is conceived, there is a conjunction of an archetypal will linked to the Law of Genesis and a specific combination of the parent's two F.P.S.A.'s.

There are 256 possible combinations.

N.B. A first book has been written on this subject. A second book, currently in print, will develop the subject of this discovery in relation to left-handed people. A third book on right-handers is in the process of being completed and published.

Discovery 5:

Since C. G. Jung, it has been established: that every woman has - to a greater or lesser extent - a hidden masculine nature called ANIMUS and that every man has - to a greater or lesser extent - a "hidden" feminine nature called ANIMA.

I have implemented the revolutionary new concept of the "DOUBLE ANIMA" for left-handed men and the "DOUBLE ANIMUS" for left-handed men. Recognising of course the terms ANIMUS and ANIMA, but only in relation to right-handed women and right-handed men.

The big difference between right-handed and left-handed people is that, at conception, the left-handed woman had an archetypal dictatorship imposed on her: you will be a man. So there is a "DOUBLE ANIMUS" in this woman.

The big difference between right-handed and left-handed men is that, at conception, the left-handed man has had an archetypal dictatorship imposed on him: you will be a woman. So this man has "DOUBLE ANIMA".

Discovery 6:

Neuro-spatial: our position in a space (a volume, a room), the way we move, what we feel.

When we are in the "right place" in a space, when we are placed in a room, for example, that corresponds to our neurosociological profile, our brain functions better.

On the other hand, if we are not in the 'right place' in a space, not corresponding to our neuro-sociological profile, our brain cannot use its full potential.

For example: if I find myself in a rectangular (classroom), square, oval or hemicycle space and I look for a seat based on my basic and sub-tonal neuro-sociological profile, I will automatically know where I should sit: either in the front left space, or in the front right space, or in the back left space, or in the back right space or in the centre. There are a multitude of possibilities, but only one place is associated with you in a neuro-spatial sense. This allows you to be 100% present in listening, receiving and relating to others. You are 100% in the manifestation of your homeostasis or internal balance. Your entire BEING is PRESENT.

How many of you have found yourself in a room and after a few moments were not at ease?

How many of you have been forced to sit in a certain seat in a classroom because of stupid school rules, thus having difficulties integrating and learning?

How many of you have fallen asleep in a chair after reading a newspaper or book for 10 minutes?

How many of you have found yourself placed in a row to the left or right because of certain alliances or rules, feeling confused and knowing that you would be better off in the opposite row?

How many of you have found yourself in a hotel room where the bed was placed more or less on the left, or on the right or in the centre, where it was impossible for you to get a deep and refreshing sleep?

How many of you have found yourselves in a hospital bed with the feeling that your recovery was exceptionally long and difficult?

How many of you have found yourselves sitting on a train or a plane in a seat that doesn't suit you, so that by the end of the journey you're totally woozy, not to mention the impatience in your legs and the irritability?

And why?

Numerous experiments have been reproduced in different contexts.

NEURO-SPATIAL REPOSITIONING based on one's neurosociological profile deserves our full attention, given the positive changes and performances it generates and implements.

Four approaches are proposed to find out your basic neurosociological profile and sub-tone:

1. Private coaching:

This is a personal meeting. With the neuro-sociological profile established, an explanation of who you are follows. You have the keys to optimising your performance potential.

• Neuro-spatial repositioning coaching :

NEURO-SPATIAL REPOSITIONING based on one's neurosociological profile deserves our full attention given the positive changes and performance it generates and implements.

2. Couple coaching:

and the weaknesses of couple dynamics. New keys to resolving conflicts, by finding the right place for everyone in the couple.

3. 3-day workshop

Phase 1 and phase 2:

Phase 1: Throughout the 1st day, participants identify the basic profile and the subtone and displacement mechanism on the right or left brain. Once this stage has been completed, the second integration phase is proposed.

Phase 2: Throughout the 2 days there will be a theoretical phase and a phase of practical exploration of movement in space with an explanation of the observations experienced by the participants and the sharing of their different feelings and awareness.

By the end of the 3 days, you'll have a perfect understanding of how to work according to your basic and subtonal profiles.
